ADDRESS TO: Assistant Commissioner for Patents
Box Patent Application
Washington, DC 20231

1. ☐ Fee Transmittal Form
(Submit an original, and a duplicate for fee processing)
2. ☒ Specification [Total Pages 23]
(preferred arrangement set forth below)
 - Descriptive title of the Invention
 - Cross References to Related Applications
 - Statement Regarding Fed sponsored R & D
 - Reference to Microfiche Appendix
 - Background of the Invention
 - Brief Summary of the Invention
 - Brief Description of the Drawings (if filed)
 - Detailed Description
 - Claim(s)
 - Abstract of the Disclosure
3. ☒ Drawing(s) (35 USC 113) [Total Sheets 28]
4. Oath or Declaration [Total Pages 51]
 - a. ☐ Newly executed (original or copy)
 - b. ☐ Copy from a prior application (37 CFR 1.63(d))
(for continuation/divisional with Box 17 completed)
[Note Box 5 below]
 - i. ☐ DELETION OF INVENTOR(S)
Signed statement attached deleting inventor(s) named in the prior application, see 37 CFR 1.63(d)(2) and 1.33(b).
5. ☐ Incorporation By Reference (useable if Box 4b is checked)
The entire disclosure of the prior application, from which a copy of the oath or declaration is supplied under Box 4b, is considered as being part of the disclosure of the accompanying application and is hereby incorporated by reference therein

6. ☒ Microfiche Computer Program (Appendix) 72 Frames
7. Nucleotide and/or Amino Acid Sequence Submission
(if applicable, all necessary)
 - a. ☐ Computer Readable Copy
 - b. ☐ Paper Copy (identical to computer copy)
 - c. ☐ Statement verifying identity of above copies

ACCOMPANYING APPLICATION PARTS

8. ☐ Assignment Papers (cover sheet & document(s))
9. ☐ 37 CFR 3.73(b) Statement ☐ Power of Attorney
(when there is an assignee)
10. ☐ English Translation Document (if applicable)
11. ☐ Information Disclosure Statement (IDS)/PTO-1449 ☐ Copies of IDS Citations
12. ☐ Preliminary Amendment
13. ☒ Return Receipt Postcard (MPEP 503)
(Should be specifically itemized)
14. ☐ Small Entity ☐ Statement filed in prior application, Status still proper and desired
15. ☐ Certified Copy of Priority Document(s)
(if foreign priority is claimed)
16. ☐ Other

17. If a CONTINUING APPLICATION, check appropriate box and supply the requisite information:

☐ Continuation ☐ Divisional ☐ Continuation-in-part (CIP) of prior application No: 60/099,665

SYSTEM AND METHOD FOR TRANSMITTING AND PROCESSING LOAN DATA

This application claims the benefit of U.S. Provisional Patent Application Serial
No. 60/099,665 filed September 9, 1998, the entire disclosure of which is incorporated
10 herein by reference.

This application includes a microfiche appendix having 1 fiche and 72 frames.

15 This application relates to Disclosure Document Number 429419, filed January
21, 1998.

20 This application includes material which is subject to copyright protection. The
copyright owner has no objection to the facsimile reproduction by anyone of the patent
disclosure, as it appears in the Patent and Trademark Office files or records, but
otherwise reserves all copyright rights whatsoever.

BACKGROUND OF THE INVENTION

25 1. Field of the Invention

The present invention relates generally to the field of disseminating loan
program information, including rate information, and to automated systems for
collecting and disseminating loan information.

30

2. Related Art

Home mortgages, home equity loans, auto loans, and other lending products may be distributed through a variety of channels, brokers, and correspondents. Particularly in the case of complex mortgage loans, there may be variable “points” and a complex set of additional adjustments to the loan rate based on the presence or absence of a variety of factors. In the past, current rates and points from particular lenders (including required adjustments) have been published to these sales channels via fax. There have also been efforts to automate the calculation of such adjustments by receiving the text of the lender’s fax sheet and parsing it analytically to apply necessary adjustments based on applicant information. Such efforts have not, however, been entirely successful in providing a user friendly and accurate interface.

An article by Jeff Butler entitled “Partnership Bridged with Technology”, *Mortgage Banking* v53n11, pp.12-19, August, 1993, generally suggests systems for allowing electronic communications links between a mortgage company and its customers-- brokers, correspondent lenders, real estate agents, and consumers. The article specifically discloses Citicorp’s MortgagePower Plus system and Countrywide Funding Corp.’s DirectLine Plus system. MortgagePower Plus provided software which permitted loan purchasers to select between loan types, enter their data and prequalify themselves, and obtain a loan commitment from the mortgage company. DirectLine Plus includes software which provides brokers with online access to Countrywide’s current loan data and the ability to lock-in a particular loan.

An article by Norman Miller entitled “Web Implications and Resources for Real Estate Finance”, *Real Estate Finance*, v13n3, pp.74-83, Fall, 1996, discloses various Internet- and intranet-based systems for processing loan applications. Miller further discloses providing electronic forms which “can be programmed to check to see if all the necessary information is included prior to transmission....”

An article by Tami Luhby entitled "Loan Processing System Offers Internet Data Access", *American Banker*, v163, p.12, June 30, 1998, discloses an online database with wholesale lenders' fees, rates, and product information. The publication also discloses online loan application processing. An article by Steven Marjanovic
5 entitled "Intuit Investing \$6M in Loan Processing Service for Web", *American Banker*, v163n116, p.13(1), June 19, 1998, discloses an Internet loan processing service website ("quickenmortgage.com") which uses loan information from lenders and allows consumers to enter data, get mortgage rate quotes, and submit loan applications.

10 Other references generally showing electronic means for processing loan or other applications include U.S. Patent 4,194,242 to Robbins, U.S. Patent 4,876,648 to Lloyd, U.S. Patent 5,239,462 to Jones, et al., U.S. Patent 5,523,942 to Tyler, et al., U.S. Patent 5,611,052 to Dykstra, et al., U.S. Patent 5,673,402 to Orion, et al., U.S. Patent 5,699,527 to Davidson, U.S. Patent 5,6742,775 to King, and U.S. Patent
15 5,765,144 to Larche, et al.

In view of the above, there is a need for a system and method which provides access to information on a variety of loan programs from different lenders, yet is accurate and results in correct calculations (including adjustments) of loan rates and
20 points by brokers and other correspondents.

OBJECTS AND SUMMARY OF THE INVENTION

25 In a preferred embodiment, the invention provides a computer system that enables mortgage lenders and commercial banks to transmit their data daily easily and inexpensively via the Internet. The system enables mortgage brokers, correspondents and retail consumers to download or access the data live via the Internet, automatically

search, calculate and apply appropriate adjustments to loan rates and points, and electronically register selected products with the selected lenders.

In its preferred embodiment, the invention provides an automated system for
5 collecting and disseminating loan information over a network connection which includes a server which receives loan data, including daily loan data, from lenders and stores the loan data in a database. A web server provides to users (e.g., brokers, correspondents, or retail loan customers) interactive web content including loan information and a list of loan criteria which would affect the quoted points, rate, cap,
10 or margin associated with a particular loan. The web server receives a user's applicable loan criteria selected from the list of possible loan criteria. And uses that applicable loan criteria and the loan data from the lender to create a list of adjustments to the points, rate, cap or margin. A quoted interest rate and the list of points and applicable adjustments are transmitted by the web server to the user.

15 By using the Internet, the preferred embodiment eliminates the costly and time-consuming tasks of transmitting product data and loan lock registration forms via the fax. It eliminates the need for brokers and correspondents to calculate rate and cost adjustments manually and for lenders to check the calculations manually. By enabling
20 electronic selection and registration of loan products the system of the invention reduces the cost to brokers and correspondents and eliminates the risk that brokers and correspondents currently experience because of the inevitable lag time between the time a broker faxes a loan order and the lender verifies the adjustment calculation and locks the rate.

25

BRIEF DESCRIPTION OF THE DRAWINGS

The foregoing and other objects, features, and advantages of the invention will
30 be apparent from the following more particular description of preferred embodiments as

illustrated in the accompanying drawings, in which reference characters refer to the same parts throughout the various views. The drawings are not necessarily to scale, emphasis instead being placed upon illustrating principles of the invention.

5 FIG. 1 is a schematic block diagram of a preferred embodiment of the system of the present invention.

FIGS. 2a-2e show screen displays illustrating the interface for the lender software of the invention.

10

FIG. 2f shows the interface of software used to import daily data from an ASCII file prepared by the lender's current spreadsheet software.

15

FIGS. 3a-3h show screen displays illustrating the interface for receiving terms and conditions from a lender to define a loan product.

FIG. 3i shows a screen display for the interface for receiving lender information from a lender.

20

FIGS. 4a and 4b show a screen display illustrating the initial page of the web interface of the invention.

FIG. 4c shows a screen display illustrating a "Find a Loan Product" page which allows a user to enter search criteria.

25

FIG. 5 shows a screen display illustrating a "Search Results" page of the web interface of the invention.

FIGS. 6a-6d show a screen display illustrating a "Points Adjustments" page of

the web interface of the invention.

FIGS. 7a-7b show a screen display illustrating a “Lock Registration Data Input” page of the web interface of the invention.

5

FIGS. 8a and 8b show a screen display illustrating an “Automated Lock Registration” page of the web interface of the invention.

10

DETAILED DESCRIPTION

The inventive system automates the process of updating and transmitting lender
15 loan product information to brokers and correspondents. Each day, lenders
automatically transfer information on rates, points, caps, and margins of their products
from their lender spreadsheets into lender software residing on their PCs, where other
product information that does not change daily (such as adjustments, loan matrix, and
lender information) is maintained. The lender software transmits all the information via
20 the Internet to a related Web site. This process is simpler to the user because it requires
no manual data input. Brokers and correspondents can access the site live via a browser
or proprietary software, with the capability to download the data to a local computer.
The broker or correspondent then has the ability to search the product offerings and
find a product with a base rate and points of his choosing. When a broker or
25 correspondent selects a product, only the adjustments and matrix information for that
particular product appear. Once the broker or correspondent selects applicable
adjustments, the system makes all the mathematical computations automatically and
displays the total cost. After viewing the total cost, the broker or correspondent may
click a button to register the loan product electronically with the lender.

The system according to a preferred embodiment stores descriptions of possible adjustments, receives current numeric values for those adjustments, and presents the possible adjustments applicable to a specific loan product (e.g. for rates, points, margin, cap, or life cap) in a standardized display format. The record for each adjustment includes criteria, amount of adjustment, and an extended amount. The possible adjustments are displayed on a screen for the broker, who may click "apply" for each adjustment if appropriate, or otherwise indicate to the software that particular adjustment criteria are applicable. If an adjustment is selected, the adjustment amount is included in automatic calculations in the form. The system also provides a report to the lender and the broker or correspondent showing the adjustments that were applied by the broker or correspondent, for quality control and audit purposes.

The software according to the preferred embodiment of the invention runs on general-purpose IBM-compatible office PCs and Macintosh computers and does not require any special equipment to access the software other than a computer, a modem or other appropriate Internet connection, and a browser such as the commonly available Netscape or Internet Explorer browsers.

Referring to FIG. 1, a database and web server 102 has an Internet connection and holds a database of loan data (e.g., rates, points, caps, margins), middleware for generating web content based upon loan data in the database, and web server software for using that web content to interact with brokers/correspondent computers Broker 1 through Broker 4.

Broker computers Broker 1 through Broker 4 are each associated with a live user, e.g., a broker/correspondent, and run Internet client software, such as a web browser, or proprietary broker software. The broker computers also have an Internet connection through which they access database and web server 102.

A loan rate service provider computer 103 has a data connection to the Internet server 102 and runs lender/bank software which creates and updates lender database files which are stored locally and are then used to update server database files stored on the database and web server 102. The loan rate service provider computer may reside, e.g., at the lender's location or at a remote site, e.g., at a loan rate service provider's site. A lender computer 110 at a lender/bank runs spreadsheet software and may have a data connection to the loan rate service provider 103. These latter two data connections may be public or private computer network connections, such as a secure Internet or private intranet connections. The spreadsheet software is used to make changes to loan data which changes daily to regularly export a file with that data which is then imported by the lender software and used to update the lender and server database files.

In a typical system according to the invention, there may be a large number of broker computers and lender computers, the number being reduced in FIG. 1 for purposes of clarity.

According to a preferred embodiment, the lender database files residing on the loan rate service provider computer 103 and the server database files residing on the web server 102 are created using scripts written for the FileMaker Pro software application manufactured by FileMaker, Inc, a subsidiary of Apple Computer. Source code for the File Maker Pro scripts used in the system are included in the microfiche appendix which is incorporated into the present specification. It should be noted that embodiments of the invention which use other database software, such as that provided by Oracle of Redwood Shores, California, is envisioned and is within the spirit and scope of the invention.

The middleware which resides on the database and web server 102, and which creates the interactive web content which is ultimately served to broker computers via

the Internet, may comprise suitable software such as, e.g., Lasso Middleware manufactured by Blue World Communications, Inc., of Bellevue, WA. Suitable web server software includes, e.g., Webstar manufactured by Starnine, Inc., of Berkeley, CA.

5

The database and web server 102 (FIG. 1) comprises a server computer such as, e.g., an Apple G3, and is hosted by an Internet service provider or is otherwise provided with a fast Internet connection.

10 An overview of the data flow will now be given, followed by a detailed description of the processes and functions associated with the various pieces of software of the invention.

First, databases of loan data are created on the loan rate service provider
15 computer. These databases are referred to herein as the “lender databases.” The loan data in these databases may include information on each lender using the system, the loan products offered by each lender, and initial information on the rates and points associated with each of those products which may be different for various regions as decided by the lender. The database structure accommodates different rates and points
20 for different regions. The lender software residing on the loan rate service provider computer 103 then uploads data from those databases to the database and web server 102, where the data is used to update similar databases residing thereon. These databases are referred to herein as the “server databases.” The server databases are then used by middleware residing on the database and web server 102 to create
25 interactive web content, e.g., HTML files. These files are served, by web server software also residing on the database and web server 102, to Internet clients (e.g., web browser software) running on broker computers Broker 1 through Broker 4. Each day, as rates and points associated with the various loan products change, bank personnel make changes to a spreadsheet running on the lender computer 110; the bank personnel

then export an ASCII file of with this “daily data” and transmit the exported file to the loan rate service provider computer 103. The daily dated file is then imported into the lender software and is used by that software to update the lender databases. Updated data from the lender databases is then transmitted to the database and web server 102, where it is used to update the server databases.

By using the invention in the above-described manner, lenders can easily make daily updates to the data (including different data for different regions) which is served out to brokers over the Internet without the need for them to perform HTML authoring on a daily basis.

A detailed description of the software of the invention will now be provided.

As discussed above, two similar sets of database files are preferably used to store loan data. The first set, which resides on the computer 103 and is manipulated by the lender software, is referred to herein as the “lender files.” The second set, which resides on the database and web server 102, is referred to herein as the “server files.”

The Lender Terms & Conditions file updates the Server Terms & Conditions file. The Lender Bank Information file updates the Server Bank Information file. The Lender Daily file updates the Server Daily file (of rates and points)

Examples of the scripts associated with the lender files and the server files are shown in the microfiche appendix which is attached hereto and is incorporated into the present disclosure. These files will now be discussed.

SERVER FILES

ServTC.FP3 - This file stores the terms and conditions associated with all products for all lenders using the system.

ServBank.FP3 - This file stores lender bank information such as the bank's
5 name, address and contact information, for all lenders using the system.

ServDail.FP3 - This file stores the updated daily information on rates and points for all products residing in Master.ndg.

Input.FP3 - This file stores all data input by the broker or correspondent. It gets data from ServDail.FP3, ServBank.FP3, and ServTC.FP3. All calculations such
10 as computing adjustments are done in Input.FP3.

LENDER FILES

LendTC.FP3 - This file stores the terms and conditions associated with all products for all lenders using the system.

15 LendBank.NDG - This file stores lender information such as the lender's name, address and contact information.

LendDail.FP3 - This file stores the updated daily information on rates and points for all products residing in LendTC.FP3

Import from Lotus.FP3 - This file imports data from an ASCII file prepared by
20 the lender's current spreadsheet such as Lotus or Microsoft EXCEL. It also converts decimal numbers to percent numbers for those data fields that are exported as decimal numbers instead of percent numbers. A button on this file's screen sends a message to LendDail.FP3 to initiate a script to lookup data from Import from Lotus.FP3

25 The lender software and update processes and data flow will now be described in more detail. The interface provided by the lender application is shown in FIGS. 2a-2e. In particular, these figures show screen displays for the lender application, including control menus for database importation, updating the database, archiving, and restoring data. These screens correspond to the file "LendDail.FP3" which is

described below. FIG. 2f shows the interface of software used to import daily data from an ASCII file prepared by the lender's current spreadsheet software, such as Lotus or Microsoft EXCEL. This screen corresponds to the file "ImportFromLotus.FP3" which is described below.

5

FIGS. 3a-3h show screen displays for the interface for receiving terms and conditions from a lender. The information indicated in these "Loan Package Detail" screen displays is provided to the system to define the available loan packages in the database. These screens correspond to the file "LendTC.FP3" which is described
10 below. FIG. 3i shows a screen display for the interface for receiving lender information from a lender. This screen corresponds to the file "LendBank.FP3" which is described below.

The lender application is used by lenders to create and update products available
15 from their institution to registered brokers and correspondents. The application allows each lender to perform three different updates of their products to the master files located on the server. The first update is to the "daily" file (LendDail.PF3), which consists of rates, points, caps, margins, and life caps. These items change daily and sometimes more than once a day, and so this update is performed often. The data used
20 to update the daily file is received from a spreadsheet file exported from a spreadsheet application running on the lender computer 110. The second type of update, which is performed less often, is to the "products" file (LendTC.FP3), which contains full matrix information, lenders information, applicable adjustments. These items do not normally change on a daily basis. The third type of update is LendBank.FP3 to
25 ServBank.FP3 to update bank information such as name, address and contact information.

Once the data has been updated in the lender software, the computer on which that software is running is connected to the Internet and, by simply selecting one of six

buttons, "Upload Daily File First Set" "Upload Daily File Second Set" or "Upload Products File First Set", "Upload Products File Second Set", "Upload Lender Info File First Set", "Upload Lender Info File Second Set", the information is uploaded to the database and web server 102.

5

Access to the content on the Internet server by brokers or correspondents is provided by either a standard Internet client (such as a web browser) or proprietary Broker/Correspondent software. Because of the ubiquity of Internet client software, embodiments wherein brokers access the Internet server using a standard Internet client is preferred. The proprietary Broker/Correspondent software and the download process performed using that software will first be described.

PROPRIETARY BROKER/CORRESPONDENT SOFTWARE

15 In one embodiment, both brokers and correspondents can download product information available from participating lenders as well as process customer loan applications with the software. This process is controlled via script, which resides in the software. These scripts are as follows:

Get Products Update - This script connects to the Internet web server and downloads either a new set of product files or a new set of daily update files.

Update Products - This script accesses the files downloaded in the Get Product Update Process, and imports either a new set of product files or a new set of daily files into the broker/correspondent software.

25 The software provided to brokers and correspondents includes customer related files, files not related to a specific customer include Lender Information, and Loan Product data.

The components of a related customer file:

- Create Customer Record - General information name and address
- Quick or Full Application - Property, loan, and customer information
- Find a Product Screen - Search criteria for customer
- 5 - List View - This page consists of just the basic information, effective date, lender short name, max LTV, max CLTV, rates, points, loan description, product number, loan term years, and loan type.
- Extended List View - This page gives more information such as margin, cap, life cap, index definition, max and minimum loan amount, conversion option, documentation.
- 10 - Loan Package Detail - Overall information of selected loan product
- Loan package Worksheet - Overall information with the ability to select adjustments to product.
- Automated Lock Registration Form - These two pages are automated information from the Loan Package Worksheet and customer information file, along with edited data from the broker or correspondent.
- 15 - Customer Record - This form keeps a tracking record if more than one loan is registered to the same customer name. In addition it keeps a tracking record of all correspondent information to each loan under that customer name.
- 20 - Closing Information - This form keeps track of all related closing information, such as closing Attorney, Appraiser, existing loan information to be paid off, new loan information, etc.
- Customer Menu - A complete menu of files above for easy selection when viewing a customer file

25

The components of the non-customer related file:

- Find a Product Screen - General search
- List View - See above
- List View Extended - See above

- Loan Package Detail - See above

Lender Information includes lender phone numbers, address, contacts, fax numbers, e-mail, and promotional descriptions. Product Data includes all product data, numbers, descriptions, and matrix information.

5

INTERNET CLIENT EMBODIMENT

As set forth above, an alternative and preferred embodiment uses a standard Internet client in place of the proprietary broker/correspondent software to provide brokers and
10 correspondents with access to the information via a website. In this embodiment, the system of the invention can be accessed live on the web without downloading any files. The web-based system preferably operates using a G-3 server with the same functionality as described herein but without the tracker file.

15 The web-based embodiment will now be described in detail with reference to FIGS. 4-8. FIGS. 4-8 show screenshots of the broker/correspondent's interface to the as seen through a standard web browser. FIGS. 4a and 4b show an initial screen. FIG. 4c shows a "Find a Loan Product" screen which allows a broker/user to select criteria needed to find a particular loan product. FIG. 5 shows a "Search Results" screen
20 which displays the results for the criteria entered in the screen shown in FIG. 4c. FIGS. 6a through 6d show an "Adjustments" screen which is used by the broker/user to determine all related cost, rate, cap, life cap, and margin adjustments that are applicable for a particular borrower. FIGS 7a and 7b show a "Lock Registration Data Input" screen which is used by the broker to input customer and broker data that is
25 required by the lending institution to properly register the loan product selected. FIGS. 8a and 8b show an "Automated Lock Registration" screen which displays all automated loan product, customer, and broker/correspondent information, including adjustment information, for viewing before electronically sending a loan product request to the lender.

The system and methods provided in the invention offer numerous advantages over the prior art. In particular, the system can be used to provide an automated information and transaction-processing service that is offered to mortgage lenders, commercial
5 banks, brokers, and correspondents via subscription. It replaces fax transmittal between Banks, Lenders, Brokers, and Correspondents.

The system of the invention provides many compelling advantages for lenders, including:

- 10 1) It enables lenders to make loan product information instantly available to the entire broker community, compared with the present method, which is costly, time consuming, and only allows the lender to reach a small portion of the broker and correspondent community.
- 15 2) It reduces costs and human errors by eliminating the need to manually check each loan lock registration calculation and manually record each broker and correspondents loan information.
- 3) It reduces costs by eliminating the need to fax product data sheets to the broker and correspondent community.
- 20 4) It reduces cost, eliminates human errors, and eliminates systemic errors associated with presenting adjustment criteria and calculating the final rate, points, cap and margin for loan products without the need to answer a large number of questions about the borrower as needed by "Rule Based" systems. This system is universal and accommodates any adjustment criterion, no matter how unusual or peculiar the criterion may be. This system uses all adjustment
25 criteria whereas "Rule Based" systems will miss some adjustments and cannot be relied upon always to be accurate. It can be used by a lending institution to send loan product to its own branches instead of using faxes.

The system of the present invention also provides many compelling advantages for brokers and correspondents, including:

- 1) It reduces costs, risk, delay, and human error by enabling brokers to select, lock, and register a loan instantly, versus the current fax method, which requires brokers to search through many faxed rate sheets, find applicable products, identify adjustments, calculate adjustments, and fill out lock-in registration forms manually that then need to be faxed to the lender to register the loan product.
- 2) Brokers and correspondents can electronically search, find, and register loan products from any location, versus the current method of receiving data from a fixed location.
- 3) It reduces costs by enabling brokers and correspondents to conduct electronic searches of thousands of loan products almost instantaneously, versus the current method, which requires brokers and correspondents to search through paper product sheets manually.
- 4) It eliminates the costly delay of sending loan lock registration forms and receiving loan product information by fax.
- 5) Brokers and correspondents can receive full matrix information that pertains to each product selected.
- 6) Brokers and correspondents do not have long-distance phone charges to fax lock forms.

Thus, an improved system and method for transmitting loan rate information has been disclosed. The systems and methods disclosed may be applied to a variety of products, particularly including retail loans (e.g. auto loans), and in the case of simple retail loans, access to the loan database may be provided to the consumer via live web access, and applications may be taken and processed in the same general manner disclosed with respect to the mortgage examples provided above.

While the invention has been particularly shown and described with reference to a preferred embodiment thereof, it will be understood by those skilled in the art that various changes in form and details may be made therein without departing from the spirit and scope of the invention.

1 The embodiments of the invention in which an exclusive property or privilege is
2 claimed are defined as follows:

3
4 1. An automated system for collecting and disseminating loan information over
5 a network connection, comprising:

6 means for receiving loan data comprising daily loan data from lenders and for
7 storing said loan data in a database;

8 means for providing to a user, over said network connection, a list of possible
9 loan criteria;

10 means for receiving, over said network connection, a user's applicable loan
11 criteria selected from said list of possible loan criteria;

12 means for using said applicable loan criteria and said loan data to create a list of
13 loan adjustments;

14 means for transmitting to said user over said network connection a quoted
15 interest rate and said list of loan adjustments.

16
17
1 2. The automated system for collecting and disseminating loan information
2 according to claim 1, wherein said loan adjustments comprise point adjustments, rate
3 adjustments, or cap adjustments.

4
5
1 3. The automated system for collecting and disseminating loan information
2 according to claim 1, wherein said loan data comprises data describing current interest
3 rates, points, caps, or margins.

4
5
1 4. The automated system for collecting and disseminating loan information
2 according to claim 1, further comprising means for interactively allowing a user to

3 select, lock, and register a loan over said network connection.

4
5
1 5. The automated system for collecting and disseminating loan information
2 according to claim 1, wherein said loan data further comprises loan product data which
3 remains constant from day-to-day.

4
5
1 6. A method for collecting and disseminating loan information over a network
2 connection, comprising the steps of:

3 providing a form to users via a network connection, said form including a series
4 of possible adjustment criteria, adjustments associated with said criteria, and means
5 associated with each of said adjustment criteria for allowing said user to indicate that a
6 criterium is applicable;

7 receiving via said network connection user input indicating that particular
8 criteria among said adjustment criteria are applicable;

9 providing to said user over said network connection a report showing user-
10 selected applicable adjustments to terms of a quoted loan product.

4 using said data from said database to create HTML pages;

5 using said server to provide said HTML pages to said user over said network
6 connection; and,

7 receiving over said network connection user input indicating a selection of
8 applicable adjustment criteria for a particular loan product.

9

10

ABSTRACT OF THE DISCLOSURE

An automated system for collecting and disseminating loan information over a network connection includes a server which receives loan data, including daily loan data, from lenders and stores the loan data in a database. A web server provides to users (e.g., brokers, correspondents, or retail loan customers) interactive web content including loan information and a list of loan criteria which would affect the quoted points, rate, cap, or margin associated with a particular loan. The web server receives a user's applicable loan criteria selected from the list of possible loan criteria. And uses that applicable loan criteria and the loan data from the lender to create a list of adjustments to the points, rate, cap or margin. A quoted interest rate and the list of applicable adjustments are transmitted by the web server to the user.

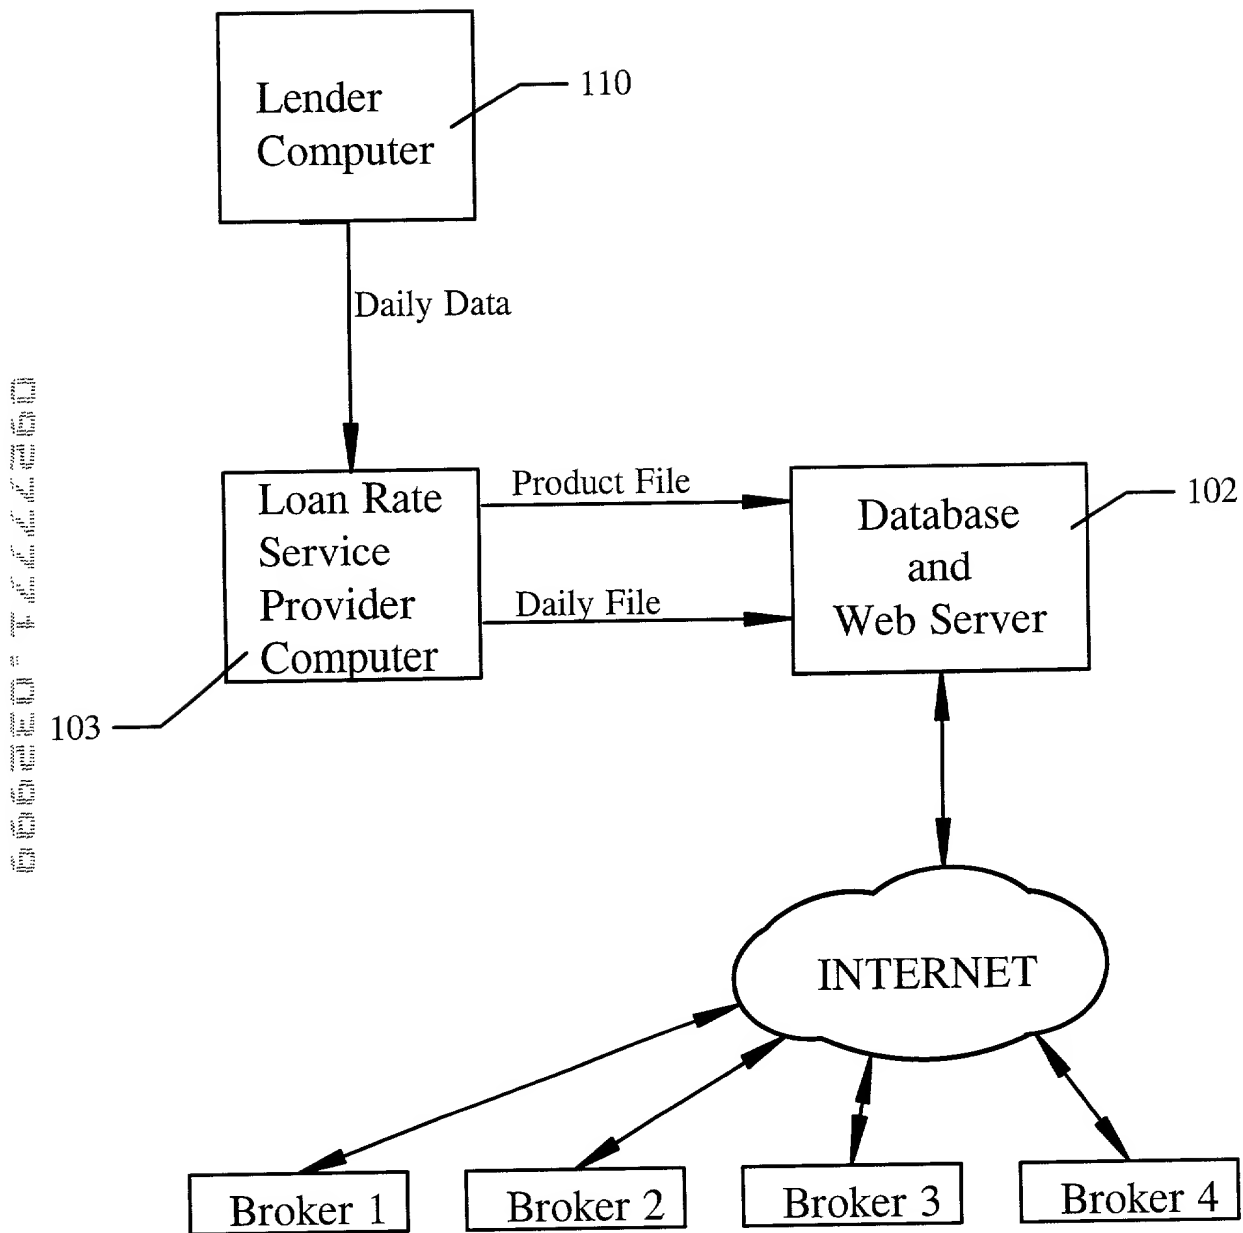

FIG. 1

Note: This program contains 3 main screens that will be used throughout this program

1. LendDail.fp3 for daily rates and points
2. LendTC.FP3 for product adjustments, terms and conditions
3. LendBank.FP3 for lender information.

You may use the Window key above on any screen to open any one of the three

Note: You must connect to the Internet before uploading data to the Internet

If you open this program before connecting to the Internet and you want to upload data to Internet, you must **EXIT** out of this program, connect to the Internet and then re-open this program to continue.

FIG. 2a

Update LendDail.fp3 N. and S. Regions when pricing is the same

Update LendDail.fp3 NE. and SE. when pricing is different

Update daily rates
and points via Internet

Update LendTC.FP3 when adjustments or notes have been changed

Update Adjustments, terms
and conditions via the Internet.

LoanRates Online is an innovative mortgage rate service for brokers, correspondents, and lenders that combines the power of the Internet with a user-friendly loan database.

LENDERS:

- Gain Nationwide Exposure and Increase Loan Productivity
- Post Rates and Product Information Quickly and Easily
- Communicate Effectively with Brokers
- Eliminate Faxing Rate Sheets

BROKERS:

- Have Current Rate and Product Information at your Fingertips
- Find the Right Loan for your Client in Seconds
- Close More Loans with Less Effort
- Work at Home or on the Road
